reading, writing and maths

Your sample

Below is the total number of pupils in your sample and number of pupils in each demographic group (n). It is important to understand your sample and how much data you have collected in comparison to your schools population. This way you can gauge how representative your results are on the following page. As a rule of thumb SCWBS requires at least 30 participants in each group to be comparable to each other.

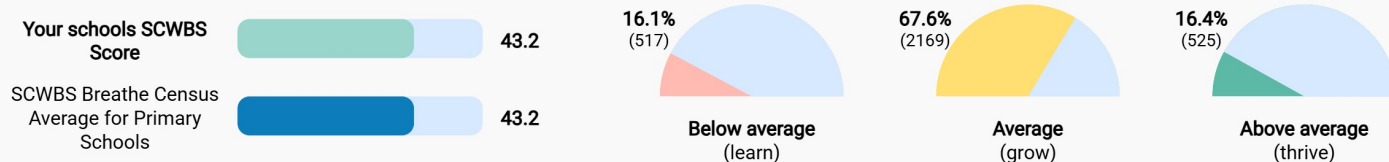

Legend:
*please note demographic groups may not add up to total completed due to missing data.
SEND: NI = None Identified; CI = Communication & Interaction; CL = Cognition & Learning; SE = SEMH; (Social, Emotional & Mental Health); PS = Physical or Sensory; All = All SEND grouped together
Free School Meals: FSM = receiving free school meals; NSM = not receiving free school meals
Absence: PA = Persistent absentee; NPA = Below PA threshold (of 10%)

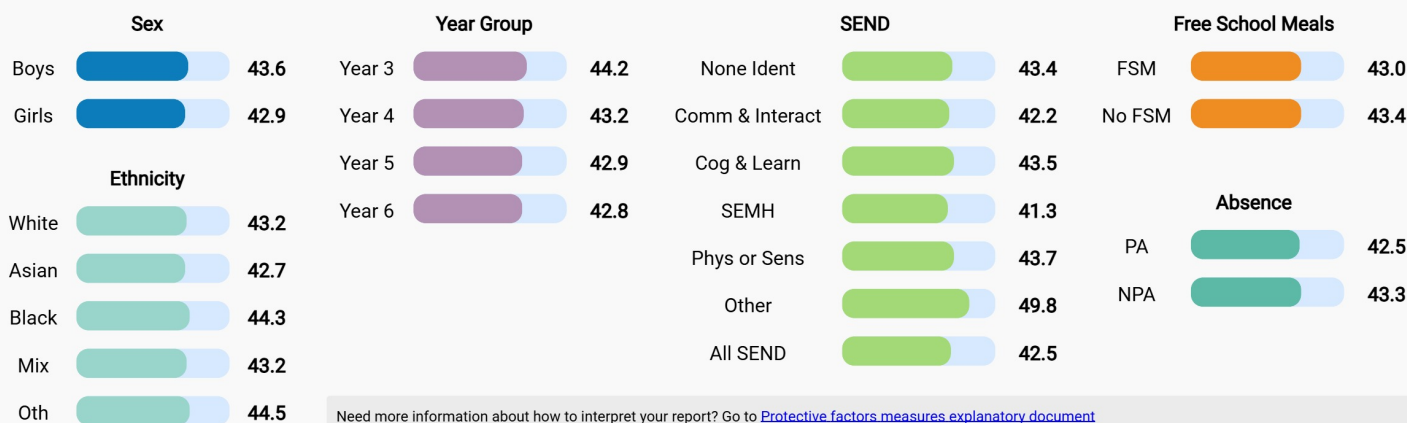

SCWBS and School Connectedness

The **SCWBS** is a validated wellbeing measure with a **scoring range of 12-60** higher scores representing higher wellbeing.

To interpret this data, we can compare your school's pupil scores to the average pupil scores of all primary schools in the census. This is achieved by calculating +1 or -1 standard deviation from the mean to indicate what percentage of your school's pupils were **"below average," "average,"** and **"above average"** in comparison to all schools.

Below are your average SCWBS scores, shown across the demographic groups you collected data for. Please note that results for groups with only a small number of pupils may be less representative of your school and less reliable for comparison. On the SCWBS scale, differences of 1-2 points or more may indicate a meaningful change between groups.

You will also find your **School Connectedness** scores below. These are based on five questions about how connected pupils feel to your school. Scores range from 5 to 25, with higher values showing a stronger sense of connectedness.
